**Interested in a PhD project to be conducted collaboratively
with the Department of Primary Industry-Victoria?**

There is an opportunity for someone who has completed honours or equivalent with a good H1, to gain a scholarship and support for a project in Soil Chemistry. The project will involve characterising different forms of soil organic matter and studying the movement of P and N between the organic and inorganic pools of these elements in the soil. The successful applicant will be expected to spend a significant part of their time with DPI and will be co-supervised by DPI scientists.
